

INSTITUTIONAL STRENGTHENING & CAPACITY BUILDING (ISCB) OF ULBs IN DELHI, U.P. AND HARYANA.

ISCB of the ULBs under YAP-II is an important value added constituent. This programme encompasses enhancement of institutional financial and human resources capacities of the 14 ULBs and Noida Authority to ensure that they undertake the responsibility of O&M of assets created under YAP-I in a sustainable manner. The positive results and lessons learnt from the Pilot Reform Fund project initiated in Agra under YAP-I will be incorporated into the YAP-II programme.

Usage of High Resolution Satellite Imagery

To encourage the creation of common reference maps for the towns in which the projects are being undertaken, recent high-resolution satellite imagery is being acquired and would be provided to the PIAs for the project works. Using this approach the maps of the existing and proposed sewerage system will be superimposed on a correctly georeferenced base map making it possible for the ULBs to systematically add and correlate other spatial information for their routine activities.

The high-resolution satellite imagery of the entire cities and towns will be used as the foundation to develop a comprehensive Property Tax System, which would facilitate strengthening of the revenue collection system of ULBs. In addition, this imagery will also be used to document the information on Slum Areas, Dairy Farms, Dhobighats, Crematoria, Slaughterhouses and Urban Water Bodies etc. in Delhi.

Training of Sugam Kendra Staff of MCD

MCD intends to leverage information and communication technologies to provide efficient, affordable, accountable and transparent municipal services to the people of Delhi. Training will be imparted to the officers and staff who are responsible for interfacing with the public and providing necessary information and services pertaining to civic activities.

This initiative will bring the MCD's e-governance programme into public focus and help in their success through thirteen specially developed Citizen Service Bureaus covering 134 wards. This unique public service initiative of MCD will provide comprehensive citizen services under one roof through computerized systems that are connected to the Internet.
